

Oticon breaks the rules. Again.

With a life-changing technological breakthrough

Introducing
Oticon Opn S™

First Oticon created a **new paradigm in hearing care**

Now, we are breaking the rules again. With Oticon Opn S, we take the open sound experience to the next level.

The revolutionary Oticon Opn broke with the conventional way of supporting people with hearing loss in noisy environments. Instead of applying narrow directionality and closing down surrounding sounds, it opened up their world. Fast and precise enough to provide access to all relevant sounds in a 360° soundscape, Oticon Opn delivered what the brain needs to make sense of sound.

Now, we break the rules again and deliver even further improvements in speech understanding and listening effort. With Oticon Opn S, we take the open sound experience and the unique benefits of BrainHearing™ to the next level!

Conventional technology has held us back

Hearing aid users are often unable to attain the prescribed gain in an open fitting due to the risk of feedback.* Hearing care professionals are therefore often restricted in their fitting and forced to make compromises as the limitations of conventional technology do not allow them to fit optimally.

OPTIMAL GAIN

You want to give optimal
gain to every user

OPEN FITTING

You want to give users the comfort of an open dome
and avoid own voice problems and occlusion

FEEDBACK

But this is often not possible
due to the risk of feedback

Until now, hearing care
has been trapped in a
world of compromise

- Sound clarity and audibility compromised by reduced gain
- Comfort compromised by closed fittings

With the introduction of the **OpenSound Optimizer™**, Oticon breaks the rules again

This new feature has made it possible for us to do things simply not possible before. The OpenSound Optimizer analyzes the amplified sound at an astonishing 56,000 times/sec. In fact, it is so fast it can detect and prevent feedback proactively, even before it occurs. This new groundbreaking feature enables you to open up your patient's world with up to six additional decibels of gain, in an open fitting – all without the risk of feedback.*

The OpenSound Optimizer represents a breakthrough in accessing speech details with more natural sound and increased comfort. Even in the most challenging listening environments it takes speech amplification to the next level, resulting in great improvements to speech understanding, without compromising clarity and sound quality.

With optimal gain, open fittings and no feedback, the OpenSound Optimizer brings users the next level of the open sound experience.

GAIN

OPEN FITTING

FEEDBACK

OpenSound Optimizer – from feedback management to feedback prevention

Old world

Traditional anti-feedback systems take about a second to detect and react to the build-up of feedback.

Because of the limitations of current technology, the management of feedback has been a long-term challenge for the hearing aid industry. Too slow to react when feedback builds, these traditional and reactive technologies manipulate the sound signal and reduce gain in order to manage the feedback loop and return to stable gain. The result is not only discomfort when feedback rises – or the compromise on sound quality and speech understanding – it also affects the brain's ability to naturally focus on the surrounding sounds.

New world

30 times faster detectors and a patented breaker signal in the OpenSound Optimizer prevents feedback from occurring.*

At Oticon, we do not accept the old world compromise. Driven by new, ultra-fast detectors, the OpenSound Optimizer can prevent feedback, even before it occurs. By applying a unique and patented feedback breaker signal, designed to take the brain's perception of sound into account, Oticon Opn S delivers up to 6 dB more stable gain, thus preserving audibility and quality of sound.

- 1 Hearing aid without feedback management**
No anti-feedback system, no detectors: Audible and uncomfortable feedback rises and persists, dramatically reducing speech understanding.
- 2 Hearing aid with conventional technology**
Traditional anti-feedback with slow detectors: With this reactive technology, feedback rises and becomes audible. Utilizing gain reduction and other measures, the hearing aid slowly returns to stability. Audibility, sound quality and speech understanding are compromised.
- 3 Oticon Opn S**
OpenSound Optimizer with ultra-fast detectors: Proactively identifies feedback risk and engages breaker signal in risk areas before feedback builds and affects sound quality. Audibility and speech are preserved.

This innovation requires a new level of processing power

Introducing the new Velox S™ platform

The brand-new Velox S platform in Oticon Opn S unleashes the full potential of the open sound paradigm. The fastest, most advanced platform we have ever developed, it fuels Oticon Opn S with unprecedented computation power to - once again - create a life-changing difference to users.

New Velox S – Oticon’s most advanced and powerful platform ever

- Increased memory enables groundbreaking improvements to the Velox platform
- New detectors monitor changes in the acoustic environment with 56,000 measurements per second, enabling the OpenSound Optimizer
- New signal processing algorithms for proactive feedback management
- New automatics drive the updated OpenSound Navigator™
- Designed for optimized rechargeable battery performance

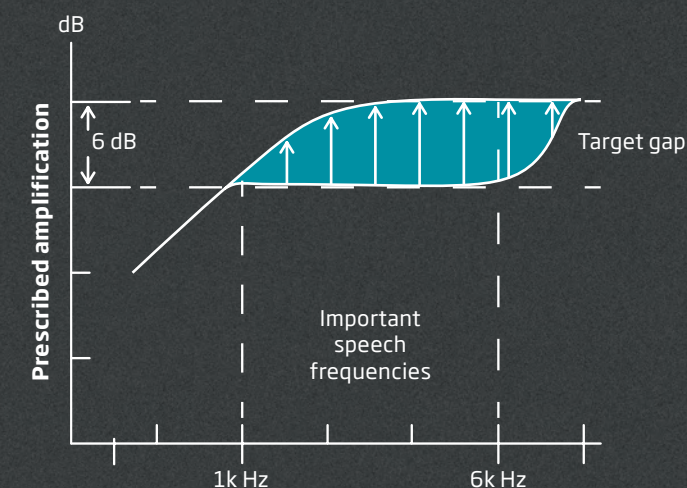

Breakthrough technology in Oticon Opn S gives you a whole new level of fitting freedom

OpenSound Optimizer delivers up to 30% more speech cues to the brain

With traditional feedback technology, meeting the prescribed target match without compromising on either gain or comfort is often challenging. This is why clinical practice today allows for a target deviation of 5 dB, leading to many users leaving the clinic under fitted. The result is that the brain is deprived of speech cues crucial to its ability to make sense of sound, potentially leading to a reduction in speech understanding, as well as an increase in listening effort.

With the OpenSound Optimizer, all this has changed. By offering the possibility to amplify speech with up to 6 additional dB, in an open fitting, Oticon Opn S can provide the brain with up to 30% more speech cues.*

* Speech intelligibility index, ANSI S3.5

Oticon Opn S introduces a boost to the open sound experience

Offering even more possibilities to meet individual user needs

Oticon Opn S, comes with an even better version of the groundbreaking OpenSound Navigator. A new Very High setting, that can be activated in Oticon Genie 2 software, offers even more help in everyday situations to those users who need it most.

Empowering users with the new OpenSound Booster

Furthermore, users can now select this extra support from the OpenSound Navigator, regardless of their pre-defined setting. Whenever they feel they need an extra boost of help, they simply activate the OpenSound Booster, available in the Oticon ON App.

With the OpenSound Navigator, we introduced a new paradigm in hearing care. It works so fast and precisely that it can attenuate unwanted noise - even between words in an open soundscape. At ultra-fast speed, it continually rebalances the soundscape while still providing constant access to all relevant sounds and speech. This is how Oticon Opn S makes it easier for the brain to decide who and what to listen to, and switch attention when needed.

OpenSound Navigator

Three steps to the open sound experience in a split second

1: Analyze

Scans the full 360° sound environment more than 100 times per second to identify noise and separate it from speech.

2: Balance

Rapidly reduces the levels of loud noise coming from specific directions, while preserving speech.

3: Noise removal

Rapidly attenuates remaining diffuse noise, even between individual words.

With Oticon Opn, we set a new industry standard. **Oticon Opn S takes it even further.**

Delivering even better speech understanding and further reduction in listening effort

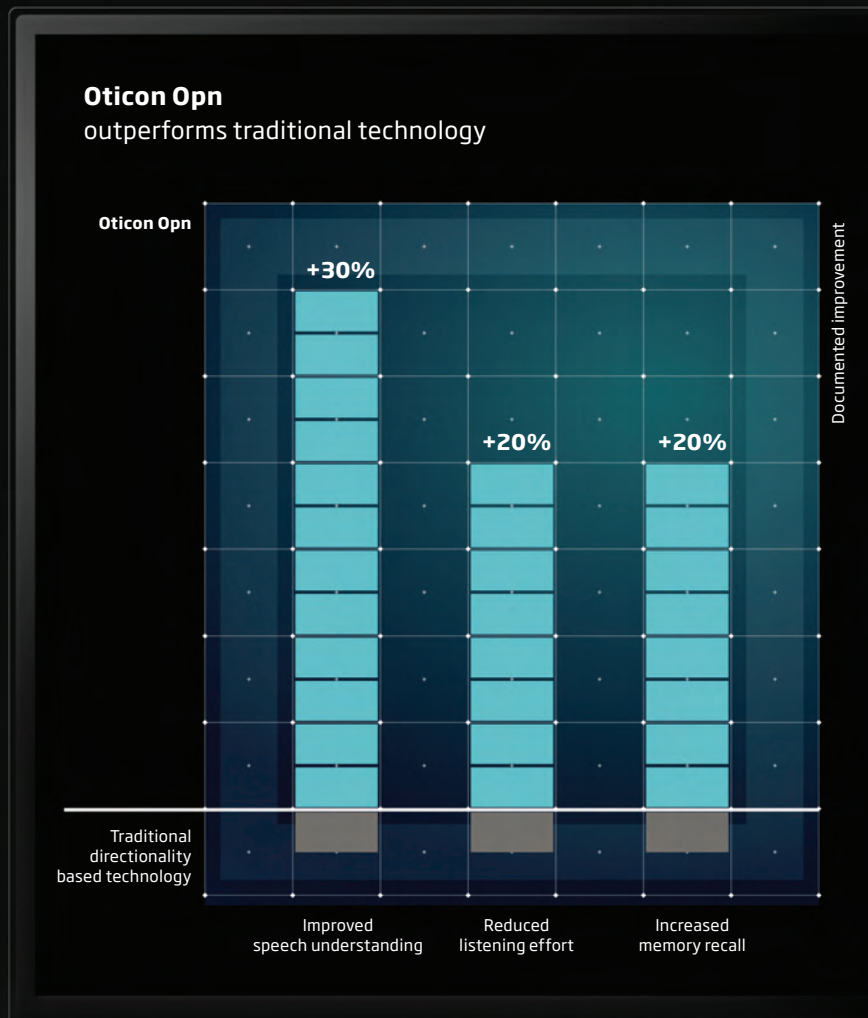

One rule we will never break is making hearing aids that work with the brain to deliver what it needs to make sense of sound. This is BrainHearing™.

With the introduction of Oticon Opn and the open sound experience, we proved how this unique approach outperformed traditional hearing aid technology when it came to understanding multiple speakers in noisy environments, while at the same time significantly reducing listening effort.

With the OpenSound Navigator and OpenSound Optimizer working together, Oticon Opn S takes BrainHearing benefits to new heights.*

Traditional technology focuses on speech coming from the front, while closing all other sounds down

Oticon Opn S delivers speech understanding on par with normal hearing in noisy environments

Closing another gap to normal hearing

Powered by the OpenSound Optimizer and the OpenSound Navigator, Oticon Opn S takes speech understanding to the next level and closes a gap to normal hearing.*

The biggest challenge for people with hearing loss is being able to thrive in noisy environments with multiple speakers. With up to 6 dB more gain, open fittings and the open sound experience, Oticon Opn S users can experience speech understanding in these difficult listening environments at the level of people with normal hearing.

Introducing the new rechargeable miniRITE R

A full day's power. Every day.

The new miniRITE R offers a unique combination of the open sound experience, superior connectivity and a state-of-the-art rechargeable lithium-ion solution in an elegant and discreet design.

In addition, this new style offers:

- Super fast three-hour charging time for a full day of power, including streaming
- Quick recharge - 30 minutes for an additional six hours of power
- Contact-free and reliable, inductive charging
- Intuitive-to-use, stable and stylish charger

Lithium-ion battery performance varies depending on hearing loss, lifestyle and streaming behavior.

Open up to a connected world

Oticon Opn S with 2.4 GHz Bluetooth low energy enables

- Streaming stereo sound to both ears
- High-quality sound - wide audio streaming frequency range (7.5 kHz)
- Low battery consumption
- Pairs with the Oticon ConnectClip accessory enabling hands-free calls and more
- Connects Oticon Opn S directly to iPhone®, iPad® and iPod touch®

Boost hearing and Oticon Opn S with the Oticon ON App

The Oticon ON App is built to empower users with a wide range of features and functionalities that add to the outstanding audiology of Oticon Opn S

The Oticon ON App makes it easy for users to control their hearing aids with just a touch of their fingertips.

The app allows users to adjust volume level, stream to devices, play tinnitus relief sounds, switch between programs and more. It also offers a "find my hearing aid" search feature, a patient information and education guide, links to hearing aid instructions, and battery status.

The app links Oticon Opn S to the Internet of Things and the possibility to connect to and control a wide range of devices in your patients' lives, as well as enabling access to OpenSound Booster and HearingFitness™.

Empowering users with the OpenSound Booster

The level of support offered by the OpenSound Navigator is reflected by the surrounding sound environment. With the OpenSound Booster, the user is empowered to trigger extra on-demand support, when they feel they need it the most.

Hearing keeps you fit

HearingFitness helps your patients get the best out of their Oticon Opn S hearing aids. Like an exercise app, HearingFitness gives hearing users advice and encouragement on ways to hear better, protect their hearing and improve their health.

HearingFitness highlights

- **Suggests optimal programs** for the sound environment
- **Gathers anonymized data** to inform product improvement
- **Rewards positive development** of listening behavior
- **Gives gentle nudges** based on data insights
- **Helps set hearing goals** and track progress towards them
- **Gives a clear overview** of hearing aid usage

HearingFitness will evolve continuously. Please find the current version and available functionalities on the App Store or Google Play.

A high performing family delivers an outstanding range of open sound opportunities

Four attractive styles and a wealth of features

OpenSound Navigator™
Less effort. Remember more. Better hearing.

OpenSound Optimizer™
Optimal gain and open fittings, without feedback risk.

Spatial Sound™ LX
Locate, follow and shift focus to the most interesting sounds.

YouMatic™ LX
Tailors OpenSound Navigator to individual needs and preferences.

Speech Guard™ LX
Improves speech understanding in noisy environments, making it easier to follow and engage in conversation.

Speech Rescue™ LX
Makes high frequency sounds more audible.

Soft Speech Booster LX
Improves soft speech understanding up to 20% - without turning up the volume.

Clear Dynamics
Better sound quality with less distortion in loud environments.

Wind Noise Management
Improves access to speech in situations with wind noise.

Tinnitus SoundSupport™
Relief sounds for tinnitus patients.

Fitting ranges across styles

* Applicable for Oticon Opn S miniRITE, miniRITE T and miniRITE R.
** Applicable for BTE PP.
Fitting Range is based on Opn S 1.
Fitting range details for Oticon Opn S 2 & Oticon Opn S 3 are available in the technical data sheets.
